

# Abstract

## A Study on the Application Method of Living Lab to Regional Innovation Activation

The purpose of this study is to find social issues and problems to be solved through the Living Lab by region of Gyeonggi-Do and to present a direction for the promotion of the technology-based Living Lab project.

The importance of Living Lab to solve social problems in science and technology is growing. In this study, we reviewed the literature related to Living Lab and examined the cases of domestic and overseas Living Lab projects. In addition, It presented regional issues and conducted a survey to promote the Living Lab project.

The results showed that citizens need to participate in Living Lab as the main players of innovation, and that it is necessary to solve local problems based on science and technology.
