

## Abstract

# A Study on the Introduction of Children's Medical Expenditure Limit system

The purpose of this study is to estimate the government finances required for the introduction of the children's medical expenditure limit system and to predict the finances that will be needed in the future.

Status analysis, scenario analysis and trend prediction analysis were conducted to estimate and predict.

In the analysis of the current status of medical expenditure for children, preschooler were the highest percentage of total medical expenditure and high school students were highest medical expenditure per person. In the scenario analysis, the financial requirements for the introduction of the 1 million won limit were 818~1,640 billion won. In the trend prediction analysis, medical expenditure of more than 1 million won are predicted to increase to 9,032 billion won in 2030.

So, the introduction of the 1 million won limit system on children's medical expenditure as a way to strengthen medical coverage for children is a system with high possibility and reality. This further improves the quality of life of children and their families, it will be a system that enables children to grow into healthy adults.
